Acknowledgments	xv
Introduction	
Development and Biology	1
Reductionist versus Evolutionary Approaches to the Study of Insect Development	1
Insect Ontogeny: A Summary	1
A Note on Phylogeny	4
Chapter 1. The Male Reproductive System and Spermatogenesis	
1.1 Male Reproductive Systems	6
1.1.1 <i>Testis</i>	6
1.1.2 <i>Primary Exit System</i>	7
1.1.3 <i>Secondary Exit System</i>	7
1.1.4 <i>External Genitalia</i>	7
1.2 Insect Spermatozoa	8
1.2.1 <i>Structure</i>	8
1.2.2 <i>Motility</i>	11
1.2.3 <i>Phylogenetic Aspects</i>	11
1.3 Spermatogenesis	13
1.3.1 <i>Primordial Development</i>	13
1.3.2 <i>Premeiotic Events</i>	13
1.3.3 <i>Meiosis</i>	14
1.3.4 <i>Spermiogenesis</i>	18
1.3.5 <i>Rate of Spermatogenesis</i>	18
1.3.6 <i>Productivity of Spermatogenesis</i>	20
1.3.7 <i>Control of Spermatogenesis</i>	21
Chapter 2. The Female Reproductive System and Oogenesis	
2.1 Female Reproductive Systems	29
2.1.1 <i>Ovaries</i>	29
2.1.2 <i>Primary Exit System</i>	30
2.1.3 <i>Secondary Exit System</i>	30
2.1.4 <i>External Genitalia</i>	32
2.2 Oogenesis	32
2.2.1 <i>Panoistic Ovarioles</i>	34
2.2.2 <i>Meroistic Ovarioles</i>	41
2.2.3 <i>Staging Oogenesis</i>	52
2.2.4 <i>Duration of Oogenesis</i>	52
2.2.5 <i>Fecundity</i>	54
2.2.6 <i>The Adaptive Significance of Conspecific Differences in Egg Size</i>	54
2.2.7 <i>Phylogenetic Aspects</i>	54
2.3 Endocrine Control of Oogenesis	58
2.3.1 <i>Previtellogenesis</i>	58
2.3.2 <i>Vitellogenesis</i>	59
2.3.3 <i>Choriogenesis</i>	61

2.4 Influence of Extrinsic Factors on Vitellogenesis	61
2.5 Genes and Oogenesis	63
Chapter 3. Sperm Transfer, Allocation, and Use	
3.1 Sperm Passage from Sperm Tubes into Seminal Vesicles and Spermatophore	65
3.2 Sperm Activation	66
3.3 Intromission and Insemination	66
3.3.1 <i>Marine Arthropods</i>	67
3.3.2 <i>Terrestrial Arthropods</i>	67
3.4 Ovulation	77
3.5 Passage of Sperm from Spermatheca to Micropyle of Egg	77
3.6 Fertilization	78
3.6.1 <i>Molecular Aspects</i>	80
3.6.2 <i>Contributions of the Sperm to Successful Fertilization</i>	81
3.7 Sperm Competition and Sexual Selection	82
3.7.1 <i>Influence of Bacterial Parasites on Fertilization and Sperm Competition</i>	86
3.7.2 <i>Copulatory Inhibitors in Drosophila melanogaster</i>	86
3.8 Copulatory Courtship	86
3.9 Oviposition	86
3.9.1 <i>Ovipositor Function</i>	88
3.9.2 <i>Adaptive Significance of the Ovipositor</i>	89
3.10 Viviparity	89
Chapter 4. Sex Determination	
4.1 Sex Chromosomes	91
4.1.1 <i>Evolution</i>	91
4.1.2 <i>Discovery</i>	92
4.2 Sex Determination in <i>Drosophila melanogaster</i>	92
4.2.1 <i>Somatic Sex Determination</i>	92
4.2.2 <i>Sex Determination of Germ Cells</i>	93
4.3 Sex Determination in Haplodiploid (Arrhenotokous) Insects	93
4.4 Chromosome Elimination and Sex Determination in Symphypleon Collembola	93
4.5 Environmental Effects on Sex Determination	94
4.5.1 <i>Temperature</i>	94
4.5.2 <i>Nutrition and Inhibitory Pheromones</i>	95
4.5.3 <i>Androgenic Hormones</i>	95
4.5.4 <i>Maternal Hemolymph</i>	96
4.6 Hermaphrodites	96
4.7 Gynandromorphs	97
4.8 Intersexes	97
4.9 Parasite Effects on Sex Determination	98
4.10 Why Are There Only Two Sexes?	99
Chapter 5. Parthenogenesis	
5.1 Arrhenotoky	101
5.2 Thelytoky	103
5.2.1 <i>Automictic</i>	103
5.2.2 <i>Apomictic</i>	103
5.3 Amphitoky	104
5.4 Evolutionary Considerations	104
5.4.1 <i>Arrhenotoky</i>	104
5.4.2 <i>Thelytoky</i>	104
5.5 Cyclical Parthenogenesis	105
5.5.1 <i>Gall Wasps</i>	105
5.5.2 <i>Aphids</i>	105
5.5.3 <i>Gall Midges</i>	107
5.5.4 <i>Micromalthus debilis</i>	108
5.6 Microorganisms and Parthenogenesis	109

Chapter 6. Early Embryogenesis	
6.1 Egg Structure	111
6.2 Cleavage	111
6.2.1 <i>Control of Cleavage Rate</i>	112
6.2.2 <i>Movement of Cleavage Energids to the Periphery</i>	113
6.2.3 <i>Chromosome Elimination in Embryos of Lower Diptera</i>	113
6.2.4 <i>Vitellophages</i>	115
6.3 Blastoderm Formation	115
6.4 DNA, RNA, and Protein Synthesis during Cleavage and Blastoderm Formation	117
6.5 Mitotic Domains in the Blastoderm of Flies	118
6.6 Pole Cell Formation	119
6.6.1 <i>Genes and Pole Cell Formation in Drosophila melanogaster Embryos</i>	120
6.6.2 <i>Substitutive Embryogeny and the Origin of Germ Cells in Orthopteroid Embryos</i>	121
6.6.3 <i>Germ Cell Origin in Polyembryonic Insects</i>	121
6.7 Germ Band Formation	122
6.7.1 <i>Factors Affecting Orientation of the Germ Band in Pentatomid (Heteroptera) Eggs</i>	122
6.7.2 <i>Polyembryony</i>	123
6.8 Gastrulation and Germ Layer Formation	125
6.8.1 <i>Genes and Gastrulation in Drosophila melanogaster Embryos</i>	126
6.9 Blastokinesis and Embryonic Envelopes	126
6.9.1 <i>Anatrepsis</i>	127
6.9.2 <i>Katatrepsis</i>	128
6.9.3 <i>Blastodermal and Serosal Cuticles</i>	129
6.9.4 <i>Blastokinesis in Long Germ Embryos and Specification of the Amnioserosa</i>	129
6.9.5 <i>Yolk Extrusion and Consumption in Long Germ Embryos of the Tephritid Fly</i> <i>Anastrepha fraterculus</i>	131
6.10 Segmentation and Appendage Formation	134
6.10.1 <i>Short Germ Embryos</i>	134
6.10.2 <i>Long Germ Embryos</i>	135
Chapter 7. Specification of the Body Plan in Insect Embryos	
7.1 Early Experiments	136
7.1.1 <i>Determinants and Mosaic Development</i>	136
7.1.2 <i>Physiological Centers</i>	136
7.1.3 <i>Gradients and Pattern Formation</i>	137
7.1.4 <i>Fate Maps</i>	143
7.1.5 <i>Developmental Genetics</i>	144
7.1.6 <i>The Compartment Hypothesis</i>	144
7.2 Molecular Genetics of Pattern Formation in <i>Drosophila melanogaster</i> Embryos	146
7.2.1 <i>Pattern-Control Genes</i>	147
7.2.2 <i>Evolutionary Considerations</i>	174
Chapter 8. Organogenesis	
8.1 Mesoderm	176
8.1.1 <i>Genes and Mesodermal Fate in Drosophila Embryos</i>	176
8.1.2 <i>Muscle Pioneers and Muscle Formation</i>	179
8.1.3 <i>Hemocytes</i>	182
8.1.4 <i>Body Cavity (Hemocoel)</i>	182
8.1.5 <i>Dorsal Vessel</i>	183
8.1.6 <i>Fat Body</i>	184
8.1.7 <i>Subesophageal Body</i>	184
8.2 Endoderm and Ectoderm	184
8.2.1 <i>Midgut</i>	184
8.2.2 <i>Foregut and Hindgut</i>	185
8.2.3 <i>Malpighian Tubules</i>	185
8.3 Ectoderm	186
8.3.1 <i>Central Nervous System</i>	186

8.3.2	<i>Peripheral Nervous System</i>	202
8.3.3	<i>Stomatogastric (Enteric) Nervous System</i>	209
8.3.4	<i>Tracheal System</i>	212
8.3.5	<i>Salivary Glands</i>	215
8.3.6	<i>Epidermis and Imaginal Discs</i>	215
8.3.7	<i>Head Involution in Embryos of Higher Flies</i>	218
8.3.8	<i>Embryogenesis of Piercing and Sucking Mouthparts</i>	220
8.3.9	<i>Skeletal Apodemes</i>	225
8.4	Primordia of Mixed Germ Layer Origin	225
8.4.1	<i>Reproductive System</i>	225
8.5	Other Tissues	228
8.6	Miscellaneous Events	228
8.6.1	<i>The Role of Apoptosis in Insect Embryogenesis</i>	228
8.6.2	<i>Induction</i>	228
8.6.3	<i>Hormones and Embryogenesis</i>	229
8.6.4	<i>Environmental Factors</i>	231
8.7	Overview	233
8.8	Computer Simulation of Gene Expression during Embryogenesis of <i>Drosophila melanogaster</i>	233
Chapter 9. Postembryonic Development and Life History		
9.1	Life History Theory	235
9.2	Hatching	235
9.3	Stage and Instar	236
9.4	Metamorphosis	236
9.4.1	<i>Ametabola</i>	236
9.4.2	<i>Hemimetabola (sensu latu) (Exopterygota)</i>	237
9.4.3	<i>Holometabola</i>	239
9.4.4	<i>Recent Concepts</i>	240
9.5	The Concept of Stase	242
9.6	Larvae and Pupae in Holometabola	243
9.6.1	<i>Larvae</i>	243
9.6.2	<i>Pupae</i>	246
9.7	Growth	256
9.7.1	<i>Patterns of Growth</i>	256
9.7.2	<i>Growth and Molting</i>	256
9.7.3	<i>Effects of Sclerotization</i>	258
9.7.4	<i>Why Don't Caterpillars Grow Short and Fat?</i>	259
9.7.5	<i>Disproportionate (Allometric) Growth</i>	259
9.7.6	<i>Diet and Developmental Polymorphism</i>	262
9.7.7	<i>Fluctuating and Directional Asymmetry</i>	262
9.7.8	<i>Number of Molts</i>	265
Chapter 10. Molting and Metamorphosis		
10.1	Molting	266
10.1.1	<i>Sensory Continuity during a Molt</i>	269
10.1.2	<i>Muscular Continuity during a Molt</i>	269
10.2	Structural Change during Metamorphosis	270
10.2.1	<i>Metamorphosis in Higher Flies</i>	270
10.2.2	<i>Mesodermal Structures</i>	273
10.2.3	<i>Structures of Mixed Germ Layer Origin</i>	275
10.2.4	<i>Ectodermal Structures</i>	278
Chapter 11. Specification of the Adult Body Pattern		
11.1	Wound Healing	302
11.2	Regeneration	302
11.2.1	<i>The Role of Morphogens in Regeneration</i>	302
11.2.2	<i>The Polar Coordinate Hypothesis</i>	304
11.2.3	<i>The Reaction-Diffusion Hypothesis</i>	304

11.2.4	<i>The Cartesian Coordinate Hypothesis</i>	306
11.3	Genetic and Molecular Basis of Leg and Wing Formation	306
11.3.1	<i>Antigenic Differences around the Circumference and between the Base and Apex of Leg Segments</i>	307
11.3.2	<i>Genetic Specification of Circumferential and Radial (Proximodistal) Axes in Leg and Wing Discs</i>	307
11.4	Genetic Specification of Other External Imaginal Primordia during Development of <i>Drosophila melanogaster</i>	316
11.4.1	<i>Antennal versus Leg Development</i>	316
11.4.2	<i>Antennae, Tarsi, Maxillary Palpus, and Proboscis</i>	316
11.4.3	<i>Abdominal Terga, Sterna, and Pleura</i>	316
11.4.4	<i>The Genital Disc</i>	317
11.5	Effects of Symbiotic Microorganisms	318
Chapter 12. Hormones, Molting, and Metamorphosis		
12.1	Classic Experiments Revealing How Hormones Induce Molting	319
12.2	Classic Experiments Revealing How Hormones Induce Metamorphosis	321
12.3	Neurosecretory Cells and Endocrine Organs	323
12.4	The Developmental Hormones	324
12.4.1	<i>20-OH Ecdysone</i>	324
12.4.2	<i>Prothoracicotropic Hormone</i>	336
12.4.3	<i>Other Ecdysiotropins</i>	336
12.4.4	<i>Allatotropin</i>	337
12.4.5	<i>Juvenile Hormones</i>	337
12.4.6	<i>Allatostatins</i>	340
12.4.7	<i>Precocenes as Antiallatotropins</i>	341
12.4.8	<i>Eclosion Hormone</i>	341
12.4.9	<i>Manduca sexta Pre-ecdysis- and Ecdysis-Triggering Hormones</i>	341
12.4.10	<i>Bursicon</i>	342
12.4.11	<i>Diapause Hormone</i>	343
12.5	The Interaction of Hormones during Molting and Metamorphosis	343
12.6	The Role of Critical Size in Molting and Metamorphosis	343
12.6.1	<i>Molting</i>	343
12.6.2	<i>Size, Growth, and Differentiation of Wing Imaginal Discs in Lepidopterans</i>	344
12.6.3	<i>Metamorphosis</i>	344
12.7	Endocrine Control of Molting and Metamorphosis in Other Arthropods	345
12.8	Hormones, Polymorphism, and Polyphenism	345
12.8.1	<i>Polyphenism in Nonsocial Insects</i>	345
12.8.2	<i>Polymorphism in Eusocial Insects</i>	347
12.9	Future Developments	351
Chapter 13. Ontogeny and Hexapod Evolution		
13.1	The Origin of Taxonomic Units or Taxa	352
13.1.1	<i>The Role of Variation and Natural Selection</i>	352
13.1.2	<i>Speciation</i>	352
13.1.3	<i>The Origin of Higher Taxa: Saltationism versus Gradualism</i>	353
13.1.4	<i>The Origin of Higher Taxa: Adaptive Zones and Key Innovations</i>	354
13.2	Key Innovations and the Insect Fossil Record	355
13.2.1	<i>Key Innovations and the Adaptive Radiation of the Hexapods</i>	355
13.2.2	<i>Earth History and the Origin of the Hexapod Orders</i>	357
13.3	Ontogeny and Hexapod Evolution	363
13.3.1	<i>The “Biogenetic Law” of Müller-Haeckel</i>	363
13.3.2	<i>The Influence of von Baer and Darwin</i>	364
13.3.3	<i>The Role of Heterochrony in Ontogeny and Phylogeny</i>	365
13.3.4	<i>Hormones, Abnormal Metamorphosis, and Macroevolution</i>	366
13.3.5	<i>The Effects of Phyletic Change in Size</i>	367
13.3.6	<i>The Influence of Conserved Cellular Processes</i>	367
13.3.7	<i>The Role of Developmental Constraint</i>	368
13.3.8	<i>Modularity</i>	369

13.3.9 <i>Expression of Homeotic and Distal-less Genes and the Evolution of Arthropod Limbs</i>	373
13.3.10 <i>Fossils, Pattern-Control Genes, Key Innovations, and Hexapod Evolution</i>	375
